REPORT ON SURVEYS OF AGRICULTURAL RESEARCH INSTITUTIONS

No. 3) //

X Report on a Survey of Institutions and Organizations
in the Near East on Foreign Mailing List of the
Library of the U. S. Department of Agriculture //

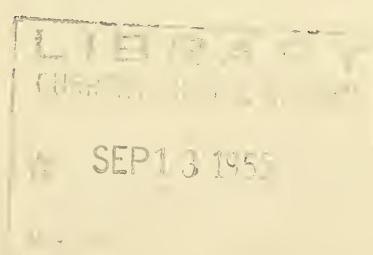

By

Louis A. Henke,
Associate Director (Retired)
Hawaii Agricultural Experiment Station

(Under provisions of the General Memorandum of Agreement,
dated February 18, 1954, between the United States Department
of Agriculture and the Foreign Operations Administration,
implemented by Special Agreement, dated June 30, 1954,
between the Foreign Operations Administration and the
Library of the United States Department of Agriculture)

7
UNITED STATES DEPARTMENT OF AGRICULTURE
LIBRARY
WASHINGTON 25, D. C.

De
1955

SUGGESTED FOREIGN MAILING LIST FOR AGRICULTURAL RESEARCH
AND EXTENSION BULLETINS TO INSTITUTIONS AND
ORGANIZATIONS IN THE NEAR EAST

(Egypt, Lebanon, Jordan, Syria, Iraq, Iran, Turkey,
Cyprus and Greece)

This survey was part of a study to create a more accurate and realistic foreign exchange list for the use of the Land Grant Colleges and Universities and the Library of the United States Department of Agriculture.

Dean Harold Macy in 1952, at that time Director of the Minnesota Agricultural Experiment Station, initiated this series of studies by visiting most of the countries in South America. His findings were reported at the 1952 meeting of the Association of Land Grant Colleges and Universities. He started his study with 604 addresses, and found that many of them were not suitable places to which to send agricultural publications. He proposed a materially reduced list which was made available to the Land Grant Colleges and Universities.

Director I. B. Johnson of the South Dakota Agricultural Experiment Station continued the study in 1954 by making a survey of institutions in and adjoining Central America. His initial list of 451 addresses was also materially reduced.

At the 1954 meeting of the Association of Land Grant Colleges and Universities, on the recommendation of the Committee on the Distribution of Publications Abroad, headed by Dr. Noble Clark, Associate Director of the Wisconsin Agricultural Experiment Station, the Director of the Library of the United States Department of Agriculture was requested to continue this study by having a survey made of countries in the Near East.

L. A. Henke, former Associate Director of the Hawaii Agricultural Experiment Station, and now retired, was secured to make the survey.

I left New York on April 21, 1955 and returned on June 10, 1955. All travel, with minor exceptions, was on regularly scheduled airlines. Trains and automobiles were used in a few cases where better connections could be made by this method. Nine different airlines were utilized.

I was greatly aided in my work by the excellent cooperation of personnel attached to the American Embassies or Consulates such as the Agricultural Attaché, the United States Information Agency officer, and by the agricultural staff members of the Foreign Operations Administration who were operating in seven of the nine countries surveyed. They were most helpful in making necessary contacts and in evaluating the proposed list of institutions and organizations. Without their guidance and help the work could not have been accomplished in the allotted time.

The reception accorded me by the people of the countries visited was very friendly, and they were very appreciative of the service being rendered to their country by the distribution of United States agricultural publications and by the FOA Missions in the different countries.

Nature of Library Facilities

It must be noted that in many cases the library facilities available in these countries are well below those that are considered standard in the United States. A good classification system and card catalog is the exception rather than the rule. The tendency too often seems to be to keep books and bulletins rather than to circulate them. Excellent small libraries are being operated in many cases by the United States Information Agency, and it was gratifying to see how widely these were being used by the people of the locality.

There is a real need for skilled librarians to work with local librarians for a period of a few months to help them develop the best possible system for receiving, cataloging and filing publications, especially bulletin material. The Dean of Agriculture (Baghdad) expressed a desire to have such a service made available.

All institutions contacted expressed a desire to expand and improve their library facilities, and it is anticipated that much progress will be made along this line in the next few years. A promising start is being made at Ankara, where carefully selected students with college training are to be sent to the United States for thorough training in library procedures. When they return, they are to constitute the Faculty of Library Training in the local University, where students from all over the country and adjoining countries will be offered training in library methods and management. These, in turn, it is anticipated, will become librarians in different centers throughout the area. This project is being financed by a United States Foundation.

Because of this present lack of good library facilities in some regions visited, it seemed desirable in these cases to send only lists of available publications (IAP). As library facilities improve, the coverage can be enlarged to better serve the needs of these countries.

Exchange Publications

In general, institutions contacted are willing to send exchange publications. However, it was impossible in the limited time at my disposal to discuss this fully with the proper authorities in all cases. It should also be noted in some cases in the Near East that there will be little of value to send. That which is available will generally be printed in Arabic, with English or French abstracts in only a few cases. It is my understanding that while suitable exchange publications are desired, the sending of United States agricultural bulletins is not contingent in all cases upon receiving a like number or even any publication in exchange, and when questioned, I expressed the above opinion. Sending publications where needed and desired is the most economical way of implementing the Foreign Aid Program.

To insure receiving exchange publications, it would be my suggestion that the United States Department of Agriculture Library, and such States and Territories as desire to use the proposed list of addresses, prepare a form letter along this line -- "Following a recent survey we have placed (or retained) your institution on our foreign mailing list for publications in the field of _____. We would in turn appreciate copies of publications which you may issue in the field of _____. "

The Proposed Foreign Mailing List

On this survey of the Near East I took along the "United States Department of Agriculture Exchange Listing" for the countries to be studied. Deletions, additions and changes in the name or address of institutions already listed and retained were made, based on my findings. The material now being sent to the different institutions on this list was geared in a large measure to specific publications of the United States Department of Agriculture, such as monthly statistical or crop reports, foreign agricultural studies, etc., which do not find their counterpart in the publications of the different agricultural colleges. In my proposed list I used codes as guides to the general interest of the institution concerned, and in some cases gave further explanatory notes. These codes are shown later, and will serve to indicate the type of material desired. However, this coded list does not fully cover the Library of the United States Department of Agriculture. For addresses retained on the list, it should continue to send the specific United States Department of Agriculture publications sent in the past. Many institutions are now accustomed to these, find the information contained valuable, and desire to continue receiving them.

Nature of Agriculture in the Near East

Agriculture in most of the areas visited is primitive compared to American standards, although there are notable exceptions. In one area a modern combine was harvesting wheat in a large field, and hand sickles were being used in an adjoining area. Climatic conditions tend to be similar to those found in the south western states, and publications from these areas would probably have the greatest value. Soils tend to be on the alkaline side, and both cultivated and wild legumes thrive where water can be supplied. Wheat and barley are common cereals in many of the countries, grown with only the moisture supplied by winter rains in many cases, and sometimes supplemented with irrigation where water can be secured.

Crops range from temperate to tropical depending on the elevation. A given country may produce apples and cherries in the higher regions and citrus fruits nearer to the sea.

Sheep and goats are the common forms of livestock, and many of the sheep are the fat tailed breeds. Livestock seems less developed than crop production, and animals are often merely an adjunct to the crop production program and are merely scavengers. The greatest need in livestock production is a better feed supply.

The Codes Used

In classifying the institutions the following symbols were used in connection with the list of names and addresses attached to this report:

E	- Economics
Ent	- Entomology
FOR	- Forestry
HEC	- Home Economics
IAP	- List of Available Publications
L	- Livestock and Poultry
N	- Human Nutrition
P	- Plant Science
Pl.Path.	- Plant Pathology
R	- Primary Repository - All Publications
S	- Soils
V	- Veterinary

It will be noted in the "Foreign Mailing List Proposed..." that IAP (List of Available Publications) is most frequently used - either because the institution preferred this or because the facilities available did not seem to justify sending publications until they were specifically requested. In an added column the nature of the institution is shown where this seemed necessary, and also the special interest where this seemed desirable.

SUMMARY OF NAMES AND ADDRESSES ON
PRESENT AND PROPOSED LISTS

On Proposed List
